The Guide to Pumping at Work

Balancing Career and Breastfeeding with Confidence

Establishing Your Pumping Schedule Aim to pump as often as your baby would typically eat. For most infants, this means pumping every 3 to 4 hours. A standard workday schedule might look like this:

- **Morning:** Nurse your baby right before leaving for work.
- **First Pump:** 9:30 AM (15-20 minutes).
- **Second Pump:** 12:30 PM (during your lunch break).
- **Third Pump:** 3:30 PM (15-20 minutes).
- **Evening:** Nurse your baby as soon as you reunite.

Flange Sizing Matters Pumping should never pinch, rub, or cause pain. If it does, your pump flanges (the plastic funnels that fit over your breasts) are likely the wrong size. A BSN-RN lactation consultant can measure you for the perfect fit to maximize output and prevent tissue damage.

Safe Breast Milk Storage Guidelines

- **Room Temperature:** Up to 4 hours.
- **Insulated Cooler with Ice Packs:** Up to 24 hours.
- **Refrigerator:** Up to 4 days.
- **Deep Freezer:** Up to 6-12 months.

Pro-Tip: Keep an extra set of pump parts and a manual hand pump (like the Haakaa) in your desk drawer or locker just in case you forget a part at home!
